

CONTENTS

Foreword	4
1 Technological progress and its consequences	6
1.1. Philosophy of technological progress.....	6
1.2. Technological progress in relay protection.....	22
1.3. Microprocessors as a base of modern stage of technological progress.....	25
1.4. Smart Grid as a dangerous vector of technological progress in electric energy industry.....	26
1.5. Dangerous trends of development of relay protection.....	28
References to Chapter I.....	37
2 Intentional Destructive Electromagnetic Interferences	42
2.1 Introduction.....	42
2.2 Brief Historical Background.....	42
2.3 The first open reliable information about HEMP and methods of protection in electric energy industry.....	45
2.4 Real state-of-the-art of protection of power systems from HEMP and other types of IDEI.....	45
2.5 Short- and medium range missiles as potential sources of HEMP, against which missile shields are forceless.....	49
2.6 What needs to be done in order to protect your country from an electromagnetic Armageddon?.....	55
2.7 Classification and features of Intentional Electromagnetic Destructive Impacts.....	55
2.8 IDEI impact on digital protection relays.....	81
2.9 Main regulatory documents in the field of IDEI.....	85
References to Chapter 2.....	89
3 Methods and means of DPR protection from electromagnetic pulse	96
3.1 Sensitivity of DPR to electromagnetic impacts.....	96
3.2 Methods of protection against IDEI.....	101
4 Passive methods and means of DPR protection from electromagnetic pulse	103
4.1 Wiring cabinets.....	103
4.2 Grounding of sensitive electronic equipment.....	104
4.3 HEMP filters.....	114
4.3.1 Ferrite filters.....	114
4.3.2 Filters based on LC-links.....	122
4.4 Non-linear surge arresters.....	131
4.5 Shielding of control cables.....	138
4.6 Structural changes of DPR.....	147
4.7 Analogue inputs.....	147

4.7.1	Discrete inputs.....	149
4.7.2	Output relays.....	151
4.7.3	Printed circuit board.....	152
4.8	Building materials.....	154
	References to Chapter 4.....	157
5	Active methods and means of DPR protection from electromagnetic pulse.....	160
5.1	New principle of active DPR protection.....	160
5.2	Current and voltage sensors based on reed-switch relays with adjustable actuation threshold.....	173
5.3	Technical and economical aspects of active DPR protection methods.....	182
5.4	Protection of remote control system	199
	References to Chapter 5.....	207
6	Tests of DPR resistance to IDEI impacts.....	209
6.1	Analysis of IDEI sources.....	209
6.2	Test parameters to check resistance to HEMP.....	215
6.3	Test parameters to check resistance to IDEI.....	217
6.4	Test equipment to check resistance to IEMI	218
6.5	Use of operation quality criterion during the electromagnetic compatibility tests of electronic instruments.....	225
6.6	Use of operation quality criterion during the IDEI resistance test of DPR.....	226
6.7	Criticism of the DPR testing method.....	228
6.8	Analysis of the second independant test of DPR of the same type.....	231
6.9	Conclusions and recommendations on DPR testing.....	235
	References to Chapter 6.....	236
7	Organizational and technical measures to protect DPR from HEMP.....	238
7.1	Problems of DPR standardization.....	238
7.1.1.	Who coordinates standardization process in the field of relay protection.....	238
7.1.2.	Main principles of DPR standardization.....	241
7.1.2.1.	Standardization of DPR external layout.....	242
7.1.2.2.	Standardization of DPR functional modules.....	245
7.1.2.3.	Standardization of DPR software.....	247
7.1.2.4.	Regarding a necessity to standardize DPR testing.....	247
7.1.2.5.	Basic principles of DPR construction as a basis for future standard.....	248
7.2.	Main principles of DPR testing standardization.....	256

CONTENTS

7.2.1.	A new approach to the problem.....	258
7.2.2.	Modern testing systems for protection relays.....	262
7.2.3.	Problems of modern testing systems for relay	
7.2.4.	protection.....	263
7.2.5.	Suggested solution of the problem.....	264
7.3.	Establishment of inventory of replacement modules as a way to improve survivability of the power system.....	266
7.3.1.	Optimization of inventory of replacement modules of electronic equipment.....	266
7.3.2.	The problem of SPTA storage	267
	References to Chapter 7.....	275
8	Protection of power supply equipment from electromagnetic pulse.....	279
8.1	Hydromagnetic effect of HEMP.....	279
8.2	Influence of E3 HEMP component on power supply equipment...	281
8.3	Protection of power supply equipment from geomagnetically- induced current impact.....	283
	References to Chapter 8.....	294
