

VLADIMIR GUREVICH

PROTECTING ELECTRICAL EQUIPMENT: GOOD PRACTICE FOR PREVENTING HIGH ALTITUDE ELECTROMAGNETIC PULSE IMPACTS

ABOUT 400 PAGES ON THE
PHENOMENON, KNOWN TO
MILITARY SPECIALISTS ONLY

NEW, NO ANALOGUES IN THE
BOOK MARKET

BIG BOOK ABOUT BIG PROBLEM

DE GRUYTER – 2019
ORDERS@DEGRUYTER.COM

*“The time for research is running out; we have the data we need.
It’s time for bold action”*

R. James Woosley

Former Director Central Intelligence Agency (CIA)

This unusual book narrates about history and development of military nuclear programs in the USSR and the USA. The book contains numerous secret documents and photos, that were recently declassified and approved for public release.

In a form accessible to non-specialists in nuclear physics, the book describes the formation process of an EMP at nuclear explosion on high altitude and discusses numerous factors affecting the EMP strength and its other parameters.

The impact of nuclear EMP on electronic components and devices and on power electrical equipment is discussed.

The main part of the book includes only a practical description (and not the theory as in hundreds existing scientific reports) of protection methods and protection means, including methods for effectiveness evaluation of protection means.

Because of its breadth in scope, originality, depth and practical importance of the described protection means, the book may be viewed as an encyclopedia of EMP and has no analogues in the book market.

The book is intended for practical electrical engineers dealing with the development, designing and operation of electronic and electrical equipment, as well as being useful for university lectures and students.

Theme of the book corresponds to the “Executive Order on Coordinating National Resilience to Electromagnetic Pulse”, signed by President D. Trump at March 26, 2019
